

K5 Genie QA Bug Report

Application	K5 Genie Application
Test Date	05/06/2026
Tested By	Nilava Pal
Total Count	28
Blocker Count	0
Critical Count	0
High Severity	7
Medium Severity	13
Low Severity	8

Current Status:

Category	Count
Total Bugs Reported	28
Fixed / Pass	14
Retest Fail	2
Partially Fixed / Partially Pass	1
Open Issues	10
Need Clarification / Pending Review	1

Bug Summary:

Bug Id	Bug Summary
Bug_001	TikTok footer link is not accessible and shows a site cannot be reached error
Bug_002	Carousel controls are misaligned on Android mobile view
Bug_003	User can delete predefined questions and replace them with custom questions
Bug_004	Edited question is not saved clearly due to missing Save action
Bug_005	Downloaded PDF does not show user-selected answers
Bug_006	Language selection does not update story content
Bug_007	Profile/logout icon shifts position and logout behavior is unclear
Bug_008	Word Work redirects to Word Quizzes and loses uploaded image
Bug_009	Downloaded PDF becomes blank when quiz has more than 45 questions
Bug_010	Camera/upload fails intermittently after repeated usage

Bug_011	Next Puzzle button does not navigate to next puzzle
Bug_012	Saved adventure deletes immediately without confirmation
Bug_013	Search results do not prioritize exact title match
Bug_014	Music Maker controls/status message are misaligned
Bug_015	Calm Hub header description text overlaps and becomes unreadable
Bug_016	OCR generates inaccurate content that significantly differs from the original uploaded text
Bug_017	Session remains active after extended inactivity without timeout warning or automatic logout
Bug_018	Ten-frame puzzle images are not properly visible on mobile devices, making activities difficult to complete
Bug_019	Check Answers (AI) does not evaluate user responses or display correct/incorrect feedback
Bug_020	Generated PDF does not create illustrations for all requested story sections
Bug_021	Generated PDF Displays Duplicate Question Numbers and Exports Internal "Question Saved" Status Messages
Bug_022	Generated PDF Displays Insufficient Spacing Between Multiple-Choice Question Content and Footer Section
Bug_023	PDF Generation Gets Stuck on "Building Your PDF..." and PDF Is Not Downloaded on Android Mobile Web for Large OCR-Generated Content
Bug_024	PDF Generation Takes Excessive Time and Does Not Provide Progress Feedback on Web and iOS Mobile Web for Large OCR-Generated Content
Bug_025	Saved Reading PDF Does Not Display Story Illustrations That Are Visible in the Application
Bug_026	Connect Dropdown Menu Items Are Truncated and Partially Hidden on iOS Mobile Web.
Bug_027	Home Language Dropdown Is Misaligned Within the Languages Section.
Bug_028	Shared Bilingual Flashcards Display Only "JAPANESE" Instead of Translated Words After Card Flip

Bug ID: Bug_001

Title: TikTok Footer Link is Not Accessible and Displays "This Site Can't Be Reached" Error

Module: Marketing Website → Footer Section

Description: When the user clicks on the TikTok social media icon available in the website footer, the application attempts to open the TikTok page but fails. Instead of redirecting to the intended TikTok profile/page, the browser displays an error message: **"This site can't be reached"** with **ERR_CONNECTION_TIMED_OUT**.

Environment: NA

Platform: Android/WEB

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Exploratory Testing

APP: K5 Genie Marketing Website

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User has internet connectivity.
- User is on the K5 Genie Marketing Website homepage.
- The footer section is visible.

Steps to Reproduce:

1. Navigate to <https://www.k5genie.com/>
2. Scroll down to the Footer section
3. Locate the TikTok social media icon.
4. Click on the TikTok icon.

Actual Result:

- The browser displays an error page with the message: "This site can't be reached" www.tiktok.com took too long to respond. ERR_CONNECTION_TIMED_OUT.
- The user is not redirected to the intended TikTok page.

Expected Result:

- Upon clicking the TikTok icon, the user should be redirected successfully to the official K5 Genie TikTok profile/page without any error.

Impact:

- ❖ Users cannot access the organization's TikTok social media page.
- ❖ Reduces social media engagement opportunities.
- ❖ Creates a poor user experience and may affect brand credibility.
- ❖ Indicates a potentially broken or incorrect external link configuration.

Recommendation (Optional):

- Verify that the TikTok URL configured in the footer is correct and active
- Validate that the URL is publicly accessible from supported regions.
- Consider adding automated link validation as part of regression testing.

Evidence / Screenshot:

Screenshot 1: Android Mobile

Screenshot 2: Web Application

QA Note: Verify whether TikTok access is restricted by network, ISP, VPN, firewall, or regional policies.

Bug ID: Bug_002

Title: Carousel Controls Are Misaligned on Android Devices in Mobile View.

Module: Marketing Website → "See the App" Section / Carousel Component

Description: In the mobile view on Android devices, the carousel navigation controls (Pause button, Previous Arrow, Next Arrow, Pagination Dots, and Slide Counter) are not displayed in a consistent horizontal alignment. The controls appear distributed across multiple rows, creating an inconsistent UI experience. The issue is not reproducible on iPhone 17, where the controls are displayed correctly.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: UI Testing/Responsiveness Testing

APP: K5 Genie Marketing Website

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- Open the K5 Genie Marketing Website on an Android device.
- Navigate to the "See the App" section.
- Observe the carousel navigation controls.

Steps to Reproduce:

1. Open <https://www.k5genie.com/>
2. Access the website using an Android mobile device.
3. Scroll down to the "See the App" section.
4. Observe the carousel controls below the content card.

Actual Result:

- Pause button, Previous Arrow, Next Arrow, Pagination Dots, and Slide Counter are displayed across multiple rows.
- Navigation controls appear visually disconnected.
- UI layout looks inconsistent on Android devices.

Expected Result:

- All carousel navigation controls should be displayed in a single row with proper spacing and alignment.
- The responsive layout should remain consistent across Android and iOS devices.
- Navigation controls should provide a clean and user-friendly appearance.

Impact:

- ❖ Poor visual presentation on Android devices.
- ❖ Inconsistent user experience across mobile platforms.
- ❖ May create confusion regarding carousel navigation controls.

Recommendation (Optional):

- Review responsive CSS/Flexbox/Grid implementation for Android viewport widths.
- Ensure carousel controls use consistent alignment rules across supported mobile devices.
- Validate UI on multiple Android screen sizes and resolutions.

Evidence / Screenshot:

Android Device (OnePlus 10 Pro 5G):

- Pause button and Previous Arrow displayed on the first row.
- Next Arrow and Slide Counter displayed on the second row.
- Pagination dots positioned separately.

Screenshot 1:

Screenshot 2:

Screenshot 3 for iOS where alignment is correct:

Bug ID: Bug_003

Title: User Can Delete Predefined Questions and Replace Them with Custom Questions

Module: Learn → Learn Hub → Read with Pictures → Question Section

Description: In the Question section of the "Read with Pictures" feature, users can edit and completely remove predefined questions generated by the system. Users can then replace them with their own custom questions. This behaviour may compromise the integrity and consistency of the educational content if predefined questions are intended to remain protected.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Exploratory Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Low

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in.
- User has access to Learn Hub.
- A "Read with Pictures" activity is generated successfully.

Steps to Reproduce:

1. Navigate to **Learn** → **Learn Hub**.
2. Select **Read with Pictures**.
3. Choose a grade level (e.g., K1 / Grades 2–3).
4. Select any available picture/content.
5. Scroll down to the **Question** section.
6. Click the **Edit** option.
7. Delete one or more predefined questions.
8. Enter custom questions and save the changes.

Actual Result:

User is able to delete predefined questions and replace them with custom questions without any restriction or warning.

Expected Result:

System-generated/predefined questions should either:

- Remain non-editable, or
- Allow modification while preventing complete deletion,

depending on the intended business requirement.

Impact:

- ❖ Educational content consistency may be compromised.
- ❖ Users may unintentionally remove important learning questions.
- ❖ Assessment quality and learning outcomes may be affected.
- ❖ System-generated content loses reliability if critical questions can be removed.

Recommendation (Optional):

- Confirm expected behavior with Product/Business stakeholders.
- If predefined questions are mandatory, restrict deletion and allow only limited editing.
- Consider providing a "Reset to Default Questions" option.

Evidence / Screenshot:

Please find the Google Drive link below: Issue1

https://drive.google.com/file/d/1h0ZcyeGMJ5hmAJmtWsuvBWainPqeM_RE/view?usp=drive_link

QA Note: If the product intentionally allows teachers/parents to customize questions, this behavior is expected and should be treated as a feature rather than a defect. Before assigning severity, confirm the intended business rule with the Product Owner.

Note: Bug_003 requires Product Owner clarification and may be reclassified as expected behavior

Bug ID: Bug_004

Title: Modified Question Is Not Saved Immediately After Editing Due to Missing Save Action

Module: Learn → Learn Hub → Read with Pictures → Question Section

Description: When a user edits an existing question and enters a new question, there is no visible Save button or confirmation action available. The modified question is not saved immediately. The changes are only persisted when the user clicks the Edit button again, which is not intuitive and may lead users to believe their changes have been lost.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Functional Testing/Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to Learn Hub.
- A Read with Pictures activity has been generated.
- Question section is available.

Steps to Reproduce:

1. Navigate to **Learn** → **Learn Hub**.
2. Select **Read with Pictures**.
3. Choose a grade level (e.g., K1 / Grades 2-3).
4. Select any available picture/content.
5. Scroll down to the **Question** section.
6. Click the **Edit** option.
7. Delete one or more predefined questions.
8. Enter custom questions.
9. Observe the screen after editing.

Actual Result:

- No Save button or Save action is displayed after modifying the question.
- User receives no indication that changes have been saved.
- The modified question is not persisted immediately.
- Changes become visible/saved only after clicking the Edit button again.

Expected Result:

- A dedicated Save button should be displayed after entering edit mode.
- User should be able to save changes explicitly.
- Changes should be persisted immediately after clicking Save.
- A success message or visual confirmation should be displayed after successful save.

Impact:

- ❖ Poor user experience due to unclear save behavior.
- ❖ Users may assume their changes were lost.
- ❖ Risk of accidental data loss if the user navigates away before triggering the hidden save mechanism.
- ❖ Violates standard usability and data-editing expectations.

Recommendation (Optional):

- Add a visible **Save** and **Cancel** button while in edit mode.
- Display a confirmation message after successful save.
- Implement auto-save only if clearly communicated to users.
- Ensure changes are persisted immediately after the save action.

Evidence / Screenshot:

Please find the Google Drive link below: Issue1

https://drive.google.com/file/d/1h0ZcyeGMJ5hmAJmtWsuvBWainPqeM_RE/view?usp=drive_link

QA Comment:

This issue impacts data persistence and usability. Users expect an explicit Save action after editing content. The current implementation creates confusion because changes are saved through an indirect action (clicking Edit again) rather than a dedicated Save mechanism. This behaviour is not intuitive and may result in perceived data loss.

Bug ID: Bug_005

Title: Downloaded PDF Shows Questions But Fails to Display User-Selected Answers (User Responses)

Module: Learn → Learn Hub → Read with Pictures → PDF Download

Description: After answering the questions and downloading the generated PDF, the document correctly displays the static questions but fails to include the specific answers/options selected by the user. The user's responses are missing or blank in the downloaded PDF, making the exported document incomplete and ineffective for reviewing or tracking the user's learning progress.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Functional Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- A Read with Pictures activity has been generated.
- Question section is available.

Steps to Reproduce:

1. Navigate to **Learn → Learn Hub**.
2. Select **Read with Pictures**.
3. Choose a grade level (e.g., K1 / Grades 2–3).
4. Select any available picture/content.
5. Scroll down to the **Question** section.
6. Answer all questions correctly.
7. Click **Download PDF** at the bottom of the page.
8. Open the downloaded PDF.

Actual Result:

- The downloaded PDF displays the questions.
- The answers selected or submitted by the user (User Responses) are missing or not visible in the PDF.
- The exported document does not accurately reflect the completed activity.

Expected Result:

The downloaded PDF should accurately mirror the completed learning activity and include:

- Story/Image content
- Questions
- User-selected answers/responses
- Any relevant activity details displayed on-screen

Impact:

- ❖ Users cannot review their submitted answers after downloading the PDF.
- ❖ Parents and teachers cannot verify the learner's responses offline.
- ❖ The exported PDF does not provide a complete record of the completed activity.
- ❖ Learning progress tracking and documentation become unreliable.
- ❖ Reduces the overall usefulness of the PDF export functionality.

Recommendation (Optional):

- Ensure the PDF generation process includes all user-selected responses.
- Validate that both questions and corresponding answers are rendered before PDF export.
- Add automated and regression test coverage for PDF content validation.
- Consider displaying a preview before generating the final PDF.

Evidence / Screenshot:

https://drive.google.com/file/d/1Y87olPWkSEELa7u8v_A3DOUeC6X20sA8/view?usp=drive_link

Bug ID: Bug_006

Title: Language Selection Does Not Update Story Content or Story Image

Module: Learn → Learn Hub → Read with Pictures → Language Selection

Description: When a user selects a different language from the language dropdown within the "Read with Pictures" activity, the story content and associated story image remain unchanged. The selected language is accepted by the UI, but the story is not translated or refreshed according to the chosen language, resulting in inconsistent behavior and a non-functional language selection feature.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Functional Testing/Localization Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to Learn Hub.
- Read with Pictures activity is available.
- Story content is loaded successfully.

Steps to Reproduce:

1. Navigate to **Learn** → **Learn Hub**.
2. Select **Read with Pictures**.
3. Choose a grade level (e.g., K1 / Grades 2–3).
4. Locate the Language dropdown.
5. Select any language other than the default (English).
6. Observe the story content and story image.

Actual Result:

- The selected language is accepted by the dropdown.
- Story content remains unchanged.
- No visible update occurs based on the selected language.

Expected Result:

- Upon selecting a different language, the story content should be translated and displayed in the selected language
- Any language-dependent content should refresh accordingly.
- The application should clearly reflect the selected language throughout the story experience.

Impact:

- ❖ Users cannot consume content in their preferred language.
- ❖ The language selection feature appears broken or non-functional.
- ❖ Creates confusion and reduces accessibility for multilingual users.
- ❖ May negatively impact the learning experience for children who rely on regional language support.

Recommendation (Optional):

- Verify language translation API/service integration.
- Refresh story content immediately after language selection.
- Display a loading indicator while translated content is being fetched.
- Validate language switching functionality across all supported stories and languages.
- Add regression coverage for multilingual content rendering.

Evidence / Screenshot:

Screenshot1: Default English language

Screenshot2: After Changed Respective Language

Bug ID: Bug_007

Title: Profile/Logout Icon Fails to Show Profile Info and Shifts Position on First Click

Module: Navigation Bar / Header → Profile/Logout Icon

Description: Clicking on the profile/logout icon in the header does not display any user profile information or dropdown menu. Furthermore, on the first click, the icon unexpectedly shifts its position from right to left without triggering any meaningful action. It requires a second click on the newly shifted icon to execute the logout process. This behaviour is broken and causes a poor user experience.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: UI Testing/Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User is on any authenticated page within the application.
- Profile/Logout icon is visible in the header.

Steps to Reproduce:

1. Log in to the application.
2. Navigate to any authenticated page.
3. Locate the Profile/Logout icon in the top-right corner of the header.
4. Click the Profile/Logout icon once.
5. Observe the icon behavior.
6. Click the shifted icon again.

Actual Result:

- On the first click, no profile information, dropdown menu, or logout option is displayed.
- The icon unexpectedly shifts position from right to left.
- No action feedback is provided to the user.
- On the second click, the user is immediately logged out of the application.

Expected Result:

- Clicking the Profile/Logout icon should display a dropdown menu containing user-related options such as:
 - Profile Information
 - Account Settings (if applicable)
 - Logout
 - I. The icon should remain in its original position.
 - II. Logout should be performed through a clearly visible menu option.
 - III. If immediate logout is intended, it should occur consistently on the first click without any UI shift or unexpected behaviour.

Impact:

- Creates confusion regarding the purpose and functionality of the Profile/Logout icon.
- Poor user experience due to unexpected UI movement.
- Users may accidentally log out without understanding the action performed.
- Navigation behaviour appear broken and inconsistent.
- Reduces usability and overall application quality.

Recommendation (Optional):

- Review the click event handling associated with the Profile/Logout icon.

- Ensure a proper dropdown menu or profile panel is displayed.
- Prevent unintended UI repositioning after user interaction.
- Provide clear visual feedback for available actions.
- Validate behavior across different mobile devices and screen resolutions.

Bug ID: Bug_008

Title: Selecting "Word Work" Redirects to "Word Quizzes" and Discards Previously Uploaded Image

Module: Create → Snap or Upload a Photo → Word List Practice Options

Description: After capturing or uploading an image through the "Snap or Upload a Photo" feature, the application displays the "Choose how to practice this word list below" screen. When the user selects the "Word Work" option, the application incorrectly redirects to the "Word Quizzes" page instead of the intended Word Work feature. Additionally, the image captured/uploaded during the previous step is not retained. The application resets the workflow and prompts the user to upload a photo again, resulting in loss of context and interruption of the expected learning flow.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Exploratory Testing/Functional Testing/Workflow Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to the Create feature.
- Device camera permissions are enabled.
- A valid image can be captured or uploaded.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Click "Snap or Upload a Photo" from the home screen.
3. Capture a photo using the device camera or upload a valid image.
4. Wait for the image to be processed.
5. On the "Choose how to practice this word list below" screen, click the **Word Work** button.
6. Observe the destination page and application behaviour.

Actual Result:

- The application redirects to the **Word Quizzes** page instead of the **Word Work** feature.
- The previously captured/uploaded image is not retained.
- The "Photo or File" upload screen is displayed again.
- The user is prompted to upload or capture a photo for a second time.
- The original workflow context is lost.

Expected Result:

- Clicking Word Work should navigate directly to the Word Work feature.
- The previously captured/uploaded image should be carried forward automatically.
- The AI processing workflow should continue using the existing image.
- Users should not be required to upload the same image again.

Impact:

- Users cannot access the intended Word Work functionality.
- The uploaded image data is lost during navigation.
- Core learning workflow is interrupted.
- Additional user effort is required to repeat the upload process.
- Creates confusion and significantly degrades the user experience.
- Blocks successful completion of the intended educational activity.

Recommendation (Optional):

- Correct the navigation mapping between the Word Work button and destination page.
- Persist uploaded image data across workflow transitions.
- Validate routing and state management for all learning-path options.
- Add end-to-end workflow testing covering:
 - Image Upload → Word Work
 - Image Upload → Word Quizzes
 - Image Upload → Other Practice Options
- Display an error message if image processing fails instead of resetting the workflow.

Evidence / Screenshot:

Please find the Google Drive link below: Issue3

https://drive.google.com/file/d/1HL1j_nlso7xH3r27E-uUF6fHqfmI0oUf/view?usp=drive_link

Bug ID: Bug_009

Title: Downloaded PDF is Blank When Quiz Contains More Than 45 Questions

Module: Create → Word Quizzes → Generated Quiz Screen → Download PDF

Description: When a large quiz containing more than 45 questions/words is generated in the Word Quizzes module, clicking the Download PDF button generates an invalid PDF output. The downloaded PDF displays only the K5 Genie branding elements (header/footer/logo), while all quiz content, questions, answer options, and generated text are missing. The document appears completely blank despite the quiz being properly displayed on-screen before export. This issue prevents users from exporting large AI-generated quizzes and significantly impacts the usability of the PDF export feature.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Functional Testing/Boundary Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always (Observed when the quiz contains more than 45 questions)

Precondition:

- User is logged in successfully.
- User has access to the Word Quizzes feature.
- A valid image has been uploaded and processed successfully.
- AI-generated quiz contains more than 45 questions/items.

Steps to Reproduce:

1. Navigate to Create → Word Quizzes.
2. Upload a valid image.
3. Generate a quiz containing more than 45 questions/items.
4. Verify that all quiz questions are displayed correctly on-screen.
5. Scroll to the bottom of the generated quiz page.
6. Click the Download PDF button.
7. Open the downloaded PDF file.

Actual Result:

- The PDF file is generated successfully.
- Only K5 Genie branding elements (logo/header/footer) are visible.
- All quiz questions, options, and generated content are missing.
- The PDF appears blank or empty.

Expected Result:

- The PDF should include all generated quiz content regardless of the number of questions.
- When the content exceeds a single page, the PDF should automatically paginate and render content across multiple pages.
- The exported document should accurately match the content displayed on-screen.
- The PDF should never be generated as a blank document.

Impact:

- Users cannot export large quizzes for offline use.
- Educational content generated by AI is lost during export.
- Parents, teachers, and students cannot print or share generated quizzes.
- Core PDF export functionality becomes unusable for large datasets.
- Creates confusion and significantly degrades the user experience.

- Significant loss of confidence in the reliability of the export feature.

Recommendation (Optional):

- Review PDF rendering logic for large datasets and pagination handling.
- Verify content size limitations within the PDF generation engine.
- Implement dynamic page-break handling for lengthy quizzes.
- Add validation to ensure content is rendered before PDF generation completes.
- Perform stress testing with quizzes containing 50, 100, and 200+ questions.
- Add automated regression tests covering PDF generation for large content volumes.

Bug ID: Bug_010

Title: Intermittent Failure When Launching Camera and Uploading Images Multiple Times Consecutively

Module: Snap or Upload a Photo → Word Quizzes → Generated Quiz Screen → Download PDF

Description: An intermittent issue occurs when the user launches the device camera multiple times consecutively within the same session. After capturing an initial photo from the home screen and navigating through the app workflow, the user attempts to capture additional or alternative images using the "Open Camera" option under the "Photo or File" section. During repeated camera usage, the camera interface sometimes freezes, fails to capture the image, or the application fails to upload/process the newly captured image. In some cases, the upload indicator continues loading without completing. This interrupts the user workflow and may require the user to retry or restart the flow.

Environment: NA

Platform: Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Exploratory Testing/Functional Testing/Workflow Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Sometimes

Precondition:

- User is logged in successfully.
- User is on the K5 Genie Home screen.
- Device camera permission is allowed & functional.
- User has access to the Create / Word Quizzes feature.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Navigate to the Home screen.
3. Click "Snap or Upload a Photo".
4. Launch the camera and capture a photo.
5. Continue to the next screen or available practice/quiz options.
6. Navigate to the "Photo Or File" section.
7. Click "Open Camera".
8. Capture another photo.
9. Repeat the "Open Camera" and image capture process multiple times consecutively within the same session
10. Observe the camera response and upload behavior.

Actual Result:

- Camera launch/upload behavior is inconsistent during repeated usage.
- The camera interface may freeze or fail to capture a new image.
- The application may fail to upload or process the captured image.
- Upload/loading indicator may continue spinning indefinitely.
- User may need to retry the upload or restart the workflow.

Expected Result:

- The camera should launch successfully every time the user clicks "Open Camera".
- Captured images should upload and process successfully on each attempt.
- Repeated camera usage within the same session should not cause freezing, hanging, or upload failure.
- The application should handle camera access and image upload consistently across multiple attempts.

Impact:

- Interrupts the continuous image capture and quiz creation workflow.
- Users may be unable to upload alternative or replacement images.
- Creates frustration due to inconsistent behaviour.
- May force users to restart the application flow.
- Reduces reliability of camera-based learning features.

Recommendation (Optional):

- Ensure the camera resource is properly released/closed after each capture attempt.
- Clear or reset previous file input/camera state before launching a new capture session.
- Handle repeated camera invocation safely for mobile web.
- Add proper timeout/error handling if image upload or processing fails.
- Display a clear error message with retry option instead of allowing infinite loading.
- Validate repeated capture/upload scenarios on Android devices.
- Add regression coverage for multiple consecutive camera capture attempts.

Evidence / Screenshot:

https://drive.google.com/file/d/1RWaJg9ve8p61QrmeuPjEmKyHQcvAR-Sb/view?usp=drive_link

Bug ID: Bug_011

Title: Next Puzzle" Button Does Not Navigate to the Next Puzzle in Pattern Strip Activity

Module: Play → Pattern Strip → Puzzle Workspace

Description: After selecting a grade level and completing a Pattern Strip puzzle, the "Next Puzzle" button fails to perform any action when clicked. The application does not load the next puzzle, leaving the user stuck on the current puzzle screen. The issue is consistently reproducible across both Web and Mobile Web platforms. In contrast, the "Previous Puzzle" button functions correctly and successfully navigate to the previous puzzle, indicating that only forward navigation is affected

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: Functional Testing/Workflow Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to the Play module.
- Pattern Strip activity is available.
- A grade level has been selected.
- At least one puzzle is loaded successfully.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to **Play** from the main menu.
3. Select **Pattern Strip**.
4. Choose any grade level (e.g., K-1, Grades 2–3, or Grades 4–5).
5. Complete the displayed puzzle.
6. Click the **Check** button if applicable.
7. Navigate to a puzzle where both navigation controls are available.
8. Click the **Previous Puzzle** button and verify backward navigation works correctly.
9. Click the **Next Puzzle** button.
10. Observe the application behavior.

Actual Result:

- The **Previous Puzzle** button successfully navigates to the previous puzzle.

- The **Next Puzzle** button does not respond.
- No navigation occurs.
- No new puzzle is loaded.
- No error message, loading indicator, or feedback is displayed.
- User remains stuck on the current puzzle screen.

Expected Result:

- Clicking the **Next Puzzle** button should load the next available puzzle in sequence.
- Forward navigation should function consistently with backward navigation.
- Users should be able to progress through all puzzles without interruption.
- Appropriate feedback/loading indicators should be displayed while loading the next puzzle.

Impact:

- Users cannot progress through the Pattern Strip activity.
- Learning flow is interrupted.
- Forward navigation is completely blocked.
- Users may assume the application is frozen or broken.
- Reduces engagement and prevents completion of the activity sequence.
- Core gameplay/learning functionality becomes partially unusable.

Recommendation (Optional):

- Verify the click event binding associated with the Next Puzzle button.
- Validate navigation routing and puzzle index increment logic.
- Check API responses responsible for loading subsequent puzzles.
- Ensure UI state is refreshed after puzzle completion.
- Add automated regression coverage for both Previous and Next Puzzle navigation scenarios.
- Display an error message if the next puzzle fails to load.

Evidence / Screenshot:

[https://drive.google.com/file/d/1_4j48iWDlp4fNr0WCiO8fPVxTGivle5i/view?usp=drive link](https://drive.google.com/file/d/1_4j48iWDlp4fNr0WCiO8fPVxTGivle5i/view?usp=drive_link)

Bug ID: Bug_012

Title: Delete Action Removes Saved Items Without Confirmation Across Multiple Modules

Module: Saved Items / Delete Functionality Across My Readings, Story Adventures, Math Practice, etc.

Description: When a user clicks the Delete/Trash icon for saved content across multiple areas of the application, such as My Readings, Story Adventures, and Math Practice, the selected item is removed immediately without displaying any confirmation dialogue, warning message, or undo option. Since this behaviour is consistent wherever the Delete action is available, users may accidentally delete saved learning content and progress without a chance to cancel.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: Functional Testing /Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- At least one saved item is available in any module where the Delete/Trash icon is shown, such as My Readings, Story Adventures, or Math Practice.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to any module containing saved items, such as:
 - Learn → My Readings
 - Learn → Story Adventures → My Adventures
 - Math Practice / saved math activity section
3. Locate any saved adventure.

4. Click the Delete (Trash) icon.
5. Observe the application behavior.

Actual Result:

- The selected adventure is deleted immediately after clicking the Delete (Trash) icon without displaying any confirmation dialog, warning message, or undo option.

Expected Result:

- Before deleting a saved adventure, the application should display a confirmation dialogue such as.
"Are you sure you want to delete this adventure?"
with options:
 - Confirm Delete
 - Cancel

Impact:

- Users may accidentally delete saved learning content.
- Reading history, adventure progress, or math practice data may be lost unintentionally.
- Users cannot verify or cancel the action before deletion.
- Since this behavior is observed across multiple modules, the risk of accidental data loss is broader.

Recommendation (Optional):

- Implement a reusable confirmation popup/modal before deleting saved content across all modules. Optionally provide an Undo option after deletion for additional user safety.

Evidence / Screenshot:

Please find the Google Drive link below: Issue8

https://drive.google.com/file/d/1HcQwqEFiHt3sgLErx_zCKdq-7VOKC5-Z/view?usp=drive_link

The same behaviour is observed across multiple modules, including My Readings, Story Adventures, and Math Practice, wherever the Delete/Trash icon is available.

Bug ID: Bug_013

Title: Search Results Prioritise Content Matches Over Exact Title Matches

Module: Global Search / Saved Work Search

Description: When searching for the keyword "**Fox**", the application displays "**The Gingerbread Man**" in the search results because the story content contains the word "fox". However, users searching for "Fox" are more likely looking for stories whose titles directly match the search term, such as "**The Fox and the Grapes**". The current search behaviour may reduce usability because exact title matches are not prioritised over content matches.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: Usability Testing / Observation

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Home Dashboard.
3. In the "Search saved work..." field enter: "Fox".
4. Observe the search results.

Actual Result:

The search results include both "The Fox and the Grapes" and "The Gingerbread Man". Although "The Gingerbread Man" contains the word "fox" within the story content, the exact title match is not clearly prioritized or distinguished from content-based matches.

Expected Result:

- Search ranking should priorities.
 - I. Exact title matches
 - II. Partial title matches
 - III. Content/body matches

Impact:

- Users may receive irrelevant search results.
- Search functionality becomes less reliable.
- Difficulty locating saved content efficiently.

Recommendation (Optional):

- Consider prioritising exact title matches above content-based matches and visually indicating why a result matched the search term (e.g., highlighting the keyword or displaying a matching text snippet)

Evidence / Screenshot:

Bug ID: Bug_014

Title: Music Maker Controls and Status Message Are Misaligned Outside the Main Content Area

Module: Create → Music Maker / Sheet Music Workspace

Description: In the Music Maker workspace, the action controls and status message are not aligned properly within the main content layout. The controls such as Stop, Loop, Share Link, and Print Sheet Music appear visually shifted and inconsistent with the surrounding content. Additionally, the status message "Added C♯. Keep building, or open Play when you're ready." appears outside the main content frame/container instead of being displayed inside the workspace area.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: UI Testing / Responsiveness Testing / Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to the Create module.
- Music Maker feature is available.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Create → Music Maker.
3. Add multiple notes/sounds to the music workspace.
4. Scroll down to the playback and sheet music section.
5. Observe the alignment of the Stop, Loop, Share Link, and Print Sheet Music controls.

6. Observe the placement of the status message displayed after adding a note.

Actual Result:

- Music Maker action controls are not aligned consistently with the main content section.
- The status message is displayed outside the main content frame/container.
- The layout appears visually inconsistent and may confuse users.

Expected Result:

- Action controls should be properly aligned within the main workspace layout.
- Status or success messages should be displayed inside the relevant content container.
- UI elements should remain visually consistent and properly contained across the page.

Impact:

- Creates an inconsistent and unpolished user experience.
- Users may perceive the layout as broken.
- Status messages displayed outside the main container may be missed or misunderstood.
- Reduces the overall UI quality of the Music Maker workflow.

Recommendation (Optional):

- Review the CSS layout, spacing, and container boundaries for the Music Maker section.
- Ensure playback controls and status messages are placed within the correct parent container.
- Validate the layout across supported desktop resolutions and responsive breakpoints.

Evidence / Screenshot:

Bug ID: Bug_015

Title: Calm Hub Header Description Text Overlaps and Becomes Unreadable

Module: Calm → Calm Hub

Description: When navigating to the Calm Hub page, the descriptive text displayed below the "Calm" heading overlaps with itself and appears rendered multiple times in the same area. As a result, the content becomes unreadable and negatively impacts the visual presentation of the page.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: UI Testing / Responsiveness Testing / Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Click on **Calm** from the top navigation menu.
3. Open the **Calm Hub** page.
4. Observe the header section below the "Calm" title.

Actual Result:

- The descriptive text below the "Calm" heading overlaps with itself.
- Multiple text strings appear rendered in the same location.

Expected Result:

- The description text should be displayed in a single line or properly wrapped.
- No overlapping or duplicate rendering should occur.
- The header section should remain visually clean and readable.

Impact:

- Creates an unprofessional UI appearance.
- Reduces readability of the page content.
- May confuse users regarding the intended description.

Recommendation (Optional):

- Review CSS styling, text container width, and responsive rendering logic for the Calm Hub header.
- Validate text rendering across supported browser resolutions and zoom levels.

Evidence / Screenshot:

Bug ID: Bug_016

Title: OCR Generates Inaccurate Content That Significantly Differs from the Original Uploaded Text

Module: Learn → Read with Pictures / OCR Text Extraction

Description: When a user uploads an image containing readable text, the OCR process extracts content that significantly differs from the original source text. Multiple words, phrases, and sentences are altered during extraction, resulting in generated content that does not accurately represent the uploaded document.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Laptop Browser (Chrome)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: Functional Testing / OCR Validation / Localization Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has an image containing readable text.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Read with Pictures.
3. Upload an image containing text.
4. Allow the application to process and extract the text.
5. Compare the extracted text with the original image content.

Actual Result:

- OCR-generated content contains multiple incorrect words and altered sentences.
- Extracted content does not match the original uploaded document.
- Meaning and context of the original text are changed during processing.

Example:

Original image text and OCR-extracted text contain word differences that alter the intended content.

Expected Result:

- Extracted content should accurately match the original uploaded document.
- Extracted text should preserve original wording, sentence structure, and meaning with minimal recognition errors.

Impact:

- Users may receive inaccurate reading material.
- Generated educational content may contain incorrect information.
- Question generation and learning activities may be based on inaccurate source content.
- Trust in OCR-generated content is reduced.

Recommendation (Optional):

- Improve OCR recognition accuracy and post-processing validation.
- Consider confidence-score validation for low-confidence OCR results.
- Review language-specific OCR models and text extraction logic.

Evidence / Screenshot:

Actual Screenshot:

Expected Result on PDF Screenshot

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) /Windows 11

Test Scope: Security Testing / Session Management Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always (Observed during testing)

Precondition:

- User is logged in successfully.
- User remains inactive and performs no actions.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Leave the browser idle without interacting with the application.
3. Wait for more than 45 minutes.
4. Return to the application and attempt to continue using it.

Actual Result:

- No session timeout warning is displayed.
- No inactivity notification is shown.
- User remains logged in after more than 45 minutes of inactivity.
- Authenticated pages and features remain accessible without re-login.

Expected Result:

- The application should display a session timeout warning after a configurable period of inactivity.
- Users should be given an option to extend their session before expiration.
- Alternatively, the application should automatically log out inactive users after the configured timeout period and redirect them to the login screen.

Impact:

- Increases the risk of unauthorised access when devices are left unattended.
- Shared devices may expose authenticated user sessions to other users.

- Session management behaviour may not align with common web application security practices.
- Users receive no indication regarding session expiration status.

Recommendation (Optional):

- Implement a configurable inactivity timeout (e.g., 30–45 minutes).
- Display a warning popup before session expiration.
- Automatically invalidate inactive sessions after the configured timeout period.
- Redirect users to the login page once the session expires.
- Validate session timeout behaviour across Web and Mobile Web platforms.

QA Note:

During testing, the authenticated session remained active for approximately 55 minutes (2:11 PM to 3:06 PM) without any inactivity warning, session timeout notification, or automatic logout. User was able to continue accessing authenticated functionality without re-authentication

Bug ID: Bug_018

Title: Ten Frame Puzzle Images Are Not Properly Visible on Mobile Devices, Making Activities Difficult to Complete

Module: Learn → Math Practice → Ten Frames — Make Ten and More

Description: When accessing the 'Ten Frames — Make Ten and More' activity on **iOS and Android mobile devices**, the ten-frame puzzle visuals are not rendered correctly. The dot patterns used for counting appear compressed, partially hidden, or significantly reduced in size compared to the Web version. As a result, users are unable to clearly view and count the puzzle elements required to solve the activity. The same activity displays correctly on the Web version, where all ten-frame puzzle visuals are clearly visible and usable.

Environment: NA

Platform: iOS & Android Mobile Web

Device Model: OnePlus 10 Pro 5G & iPhone (iOS17)

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) / iOS 17

Test Scope: Functional Testing / Responsiveness Testing / Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to the Learn module.
- Math Practice activities are available.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Math Practice.
3. Open the activity "Ten Frames — Make Ten and More".
4. Observe the ten-frame puzzle visuals displayed for each question.
5. Compare the same activity with the Web version.

Actual Result:

- Ten-frame puzzle visuals appear compressed and are not clearly visible on iOS and Android mobile devices.
- Dot patterns required for counting are difficult to identify.
- Input fields occupy most of the available space while puzzle content becomes visually restricted.
- Users cannot clearly view or count the puzzle elements required to solve the activity.

Expected Result:

- Ten-frame puzzle visuals should be fully visible and properly scaled on iOS and Android mobile devices.
- All dots and counting elements should be clearly displayed.
- Users should be able to complete the activity without zooming, scrolling, or guessing puzzle content.
- Mobile and Web versions should provide a consistent learning experience

Impact:

- Children may be unable to correctly count the puzzle elements.
- Educational content becomes difficult to understand.
- Core learning activity cannot be completed reliably on mobile devices.
- Creates an inconsistent experience between Web and Mobile platforms.
- Negatively impacts usability and learning effectiveness.

Recommendation (Optional):

- Review responsive rendering of the ten-frame puzzle component on iOS and Android devices.
- Ensure puzzle images/components maintain minimum visibility and scaling requirements.
- Validate the activity across multiple iPhone screen sizes and orientations.
- Perform responsive testing for all math activities containing visual puzzle elements.

Evidence / Screenshot:

Screenshot 1: For web clearly visible DOTs

For Mobile, please find the below Google Drive link for better understanding:

For iOS:

https://drive.google.com/file/d/1hmACHV8zqlB6cSPgcW64QOxehSH9WkXE/view?usp=drive_link

For Android:

https://drive.google.com/file/d/1FTRdosmU7X3h-8FduErvK-h6GdmyrsCA/view?usp=drive_link

Bug ID: Bug_019

Title: Check Answers (AI) Does Not Evaluate User Responses or Display Correct/Incorrect Feedback.

Module: Learn → Math Practice → Ten Frames — Make Ten and More

Description: After entering answers in the Ten Frames activity and clicking the "Check Answers (AI)" button, the application fails to evaluate the submitted responses. No feedback is displayed to indicate whether the answers are correct or incorrect. No score, validation result, AI-generated feedback, success message, or error message is shown. During testing, the "Answer" button functioned correctly and successfully displayed the expected answers. However, the "Check

Answers (AI)" functionality failed to provide any evaluation or validation of the user-submitted responses.

Environment: NA

Platform: iOS, Android Mobile Web, & Web

Device Model: OnePlus 10 Pro 5G, iPhone (iOS17) & Web

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS), iOS & Windows 11

Test Scope: Functional Testing / Workflow Testing /AI Validation Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to the Learn module.
- Math Practice activities are available.
- Ten Frames activity is loaded successfully.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Math Practice.
3. Open the activity "Ten Frames — Make Ten and More".
4. Enter answers for the displayed questions.
5. Click the "Answer" button and verify that answers are displayed successfully.
6. Click the "Check Answers (AI)" button.
7. Observe the application behavior.

Actual Result:

- The "Answer" button displays answers successfully.
- The "Check Answers (AI)" button does not evaluate the submitted responses.

- No indication is displayed showing whether answers are correct or incorrect.
- No score, validation result, or AI-generated feedback is shown.
- No success message or error message is displayed.
- User receives no feedback regarding submitted answers.
- No loading indicator, score, validation result, or AI-generated feedback is displayed after clicking "Check Answers (AI)".

Expected Result:

- The application should evaluate all submitted answers.
- Correct answers should be clearly identified.
- Incorrect answers should be highlighted appropriately.
- Users should receive feedback, scoring, or AI-generated evaluation results.
- The application should provide meaningful learning guidance based on the submitted responses.

Impact:

- Users cannot determine whether their submitted answers are correct or incorrect.
- Educational feedback loop is broken.
- Learning progress cannot be validated.
- Users may lose confidence in the AI evaluation functionality.
- Core learning workflow becomes ineffective.
- Reduces the educational value of the activity.
- Users cannot verify whether their submitted answers are correct before proceeding with the activity.

Recommendation (Optional):

- Verify the click event and backend integration associated with the "Check Answers (AI)" button.
- Ensure answer validation logic is executed successfully after submission.
- Display correct/incorrect indicators for each answer.
- Provide score calculation and AI-generated feedback where applicable.
- Add proper error handling if AI evaluation fails.
- Add automated regression coverage for answer validation workflows.

Evidence / Screenshot:

Please find the Google Drive link below:

For Mobile:

https://drive.google.com/file/d/1dOdYwsLbPLA-WMjypxS_5u5PGAXdx8AC/view?usp=drive_link

For Web:

https://drive.google.com/file/d/1h3KYGFik7QgkQzLbK6OuAQ7jVptnYerr/view?usp=drive_link

QA Note:

During testing on both Web and Mobile Web platforms, the "Answer" button displayed expected answers correctly. However, the "Check Answers (AI)" button consistently failed to evaluate user responses or provide any feedback, indicating that the issue is isolated to the AI answer validation functionality rather than the answer generation feature.

Bug ID: Bug_020

Title: Generated PDF Does Not Create Illustrations for All Requested Story Sections.

Module: Learn → Read with Pictures → Paste Text

Description: When multiple story prompts containing different animals are provided in the "Paste Text" section with "Generate Images (AI)" enabled, the generated PDF does not create illustrations for all requested story sections. The generated content contains references to multiple animals; however, only a subset of the animals receives corresponding visual illustrations in the final PDF output. During testing, prompts were provided for five different animals (Tiger, Elephant, Dog, Fox, and Lion). The generated PDF contained illustrations for only the Tiger and Dog sections, while the Elephant, Fox, and Lion sections appeared as text-only content without corresponding images

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G, iPhone (iOS17) & Web

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS), iOS & Windows 11

Test Scope: Functional Testing / AI Content Generation Testing / PDF Validation Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always (Observed During Testing)

Precondition:

- User is logged in successfully.
- User has access to the Read with Pictures module.

- Generate Images (AI) option is enabled.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Read with Pictures.
3. Select the Paste Text option.
4. Enable "Generate Images (AI)".
5. Enter multiple story prompts containing different animals or subjects.
6. Click "Create My Reading."
7. Generate and download the PDF output.
8. Review the generated illustrations and story sections

Actual Result:

- The PDF contains story sections for multiple animals.
- Only some story sections receive generated illustrations.
- Remaining story sections appear as text-only content without corresponding images.
- Visual coverage of the generated content is incomplete.

Expected Result:

- Every generated story section should receive a corresponding illustration when image generation is enabled.
- Alternatively, the application should clearly indicate any limitation regarding the number of images generated per reading.

Impact:

- Users may expect visual illustrations for all generated story sections.
- Educational content becomes inconsistent when some sections contain images and others do not.
- Children may receive incomplete visual learning support.
- Generated PDF output may not accurately represent all requested content.

Recommendation (Optional):

- Verify image-generation logic for multi-section content.
- Ensure all generated story sections receive corresponding illustrations when AI image generation is enabled.

- If image generation is intentionally limited, clearly communicate the limitation to users before generation.

Evidence / Screenshot:

Screenshot 1: Evidence of multiple prompts

Screenshot 2:

Only two images are generated.

QA Note:

This finding assumes that AI image generation is expected to create illustrations for each generated story section. If the product intentionally limits the number of generated illustrations per reading, this behaviour should be documented or communicated to users.

Bug ID: Bug_021

Title: Generated PDF Displays Duplicate Question Numbers and Exports Internal "Question Saved" Status Messages.

Module: Learn → Read with Pictures → Questions Section → PDF Export

Description: After successfully editing questions and downloading the generated PDF, the PDF contains formatting inconsistencies. The PDF displays duplicate question numbering and also includes internal UI status messages such as "Question saved.", which are intended only for on-screen user feedback and should not appear in exported learning content.

For example:

Application UI:

1. Hello, this I want to change

Generated PDF:

- 1.1. Hello, this I want to change

Additionally, "Question saved." messages are rendered within the PDF output between questions.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Web

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) & Windows 11

Test Scope: Functional Testing / PDF Export Testing / Regression Testing / Usability Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to Learn → Read with Pictures.

- Reading content and questions are generated successfully.
- User edits one or more generated questions.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Read with Pictures.
3. Generate reading content with questions.
4. Click Edit on any question.
5. Modify the question text.
6. Save the edited question.
7. Verify that the updated question is displayed correctly in the application.
8. Click Download PDF.
9. Open the generated PDF.
10. Observe the question numbering and displayed content.

Actual Result:

- Edited questions are displayed correctly in the application UI.
- The generated PDF displays duplicate numbering for questions.
- Example:
 - UI: 1. Hello, this I want to change
 - PDF: 1. 1. Hello this I want to change
 - Internal UI status messages such as "Question saved." are included in the exported PDF.
 - The exported PDF content does not match the clean presentation shown in the application.
 - The issue is reproducible on both Web and Mobile Web platforms.

Expected Result:

- Question numbering should appear only once in the generated PDF.
- Internal UI feedback messages such as "Question saved." should not be included in exported documents.
- PDF content should accurately reflect the final user-facing learning content.
- Exported PDF formatting should remain consistent with the application UI.

Impact:

- Downloaded educational content appears incorrectly formatted.

- PDF output contains unnecessary system-generated messages.
- Creates an unprofessional appearance in exported learning materials.
- Causes inconsistency between the application view and the exported PDF.
- May confuse students, parents, or teachers using the generated PDF

Recommendation (Optional):

- Review PDF export rendering logic for edited questions.
- Exclude UI notification/status messages from PDF generation.
- Ensure numbering is applied only once during PDF rendering.
- Validate exported PDF content against the final displayed UI content before generation.

Evidence / Screenshot:

Screenshot UI:

Screenshot of PDF:

Please find the Google Drive link also: (Issue11)

https://drive.google.com/file/d/1NvQAacVVDU5u2a_v3V5o5sc3Wx3Z1s_2/view?usp=drive_link

QA Note:

This issue was observed during continued validation of the PDF export functionality on both Web and Mobile Web platforms. The issue appears to be related to PDF rendering and content formatting, where UI feedback messages and duplicate numbering are incorrectly included in the exported document.

Bug ID: Bug_022

Title: Generated PDF Displays Insufficient Spacing Between Multiple-Choice Question Content and Footer Section.

Module: Learn → Read with Pictures → Multiple Choice Questions → PDF Export

Description: When exporting generated reading content as a PDF, pages containing multiple-choice questions do not maintain sufficient spacing between the question content and the footer section. The issue is consistently observed when a larger number of multiple-choice questions are generated, causing the page layout to appear compressed near the bottom of the page.

Environment: NA

Platform: Mobile Web & Web

Device Model: OnePlus 10 Pro 5G & Windows Laptop

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) & Windows 11

Test Scope: PDF Export Testing / UI Testing / Usability Testing / Regression Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to Learn → Read with Pictures.
- Reading content and Multiple-Choice Questions are generated successfully.
- PDF export functionality is available.

Steps to Reproduce:

1. Open the K5 Genie application.
2. Navigate to Learn → Read with Pictures.
3. Generate reading content with Multiple Choice Questions.
4. Complete content generation successfully.
5. Click Download PDF.
6. Open the generated PDF.
7. Navigate to the page containing Multiple Choice Questions.
8. Observe the spacing between question content and the footer section.

Actual Result:

- Question content extends very close to the footer area.
- Footer elements such as QR code, page number, website URL, and copyright text appear too close to the content section.
- The PDF does not maintain sufficient bottom margin.
- Layout appears compressed and visually inconsistent.
- Insufficient spacing is maintained between question content and footer elements.
- The page layout appears visually compressed near the bottom section.
- The issue is consistently observed on pages containing a larger number of multiple-choice questions.
- As the question count increases, the available spacing between content and footer becomes noticeably reduced.

Expected Result:

- Question content should remain within the designated content area.
- Adequate spacing should be maintained between content and footer sections.
- Footer elements should be displayed consistently without affecting content layout.
- PDF pages should maintain proper margins and professional formatting.

Impact:

- Exported PDF appears visually unpolished.
- Visual readability and presentation quality are reduced.
- Educational materials may appear poorly formatted when shared with students, parents, or teachers.
- Creates inconsistent formatting across generated PDF documents and pages.

- Negatively impacts overall user experience and document presentation.

Recommendation (Optional):

- Review PDF rendering and page layout calculations.
- Apply consistent bottom margins across all PDF pages.
- Ensure content containers respect footer boundaries.
- Validate PDF formatting for all generated content types, including Multiple Choice Questions, Short Answer Questions, and Worksheets.

Evidence / Screenshot:

Screenshot 1: Generated PDF showing reduced spacing between multiple-choice question content and footer elements.

Please find the Google Drive link also: (Issue12)

[https://drive.google.com/file/d/1SLB1ehEXDFVPb4-pp_FVRyQ5CrwwqJI-/view?usp=drive link](https://drive.google.com/file/d/1SLB1ehEXDFVPb4-pp_FVRyQ5CrwwqJI-/view?usp=drive_link)

QA Note:

This issue was observed during continued PDF export validation. The problem appears to be related to PDF layout and spacing management rather than any recently implemented fix.

Bug ID: Bug_023

Title: PDF Generation Gets Stuck on "Building Your PDF..." and PDF Is Not Downloaded on Android Mobile Web for Large OCR-Generated Content.

Module: Snap or Upload a Photo → Word Work → Word Quizzes → PDF Export

Description: When a user uploads or captures an image containing a large amount of content through the "Snap or Upload a Photo" feature and navigates through Word Work → Word Quizzes, the generated Word practice content is displayed successfully. However, when the user clicks Download PDF, the PDF generation process gets stuck at the "Building your PDF..." loading state, and the PDF is never downloaded on Android Mobile Web. The issue appears to be related to larger OCR-generated content. During testing, smaller content sets completed successfully, whereas larger generated content consistently triggered the issue.

Environment: NA

Platform: Android Mobile Web

Device Model: OnePlus 10 Pro 5G

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS)

Test Scope: Functional Testing / PDF Export Testing / OCR Validation Testing / Regression Testing / Cross-Platform Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): High

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always (Observed with large OCR-generated content)

Precondition:

- User is logged in successfully.
- User has access to the Snap or Upload a Photo feature.
- User uploads or captures an image containing a large amount of text/content.
- OCR processing completes successfully.
- Word Work and Word Quizzes content is generated successfully.
- PDF export functionality is available.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Click "Snap or Upload a Photo" from the home screen.

3. Capture a photo or upload an image containing a large amount of text/content.
4. Wait for OCR processing to complete.
5. On the "Choose how to practice this word list below" screen, click Word Work.
6. Click Word Quizzes.
7. Wait for the "Building your word practice..." process to complete.
8. Scroll to the bottom of the generated content.
9. Click Download PDF.
10. Observe the PDF generation process.

Actual Result:

- Word practice content is generated successfully.
- The application displays the "Building your PDF..." loading message.
- PDF generation does not complete on Android Mobile Web.
- No PDF file is downloaded.
- No success message or error message is displayed.
- The issue is consistently observed with larger OCR-generated content.
- On Web and iOS Mobile Web, the PDF eventually downloads after a noticeable delay, but Android Mobile Web fails to complete the process.

Expected Result:

- PDF generation should complete successfully regardless of content size.
- The generated PDF should be downloaded successfully on Android Mobile Web.
- Users should receive clear progress feedback while the PDF is being generated.
- If PDF generation fails, a meaningful error message should be displayed.
- PDF export behavior should remain consistent across supported platforms.

Impact:

- Users cannot download generated Word Quizzes learning materials on Android Mobile Web.
- Large OCR-generated content becomes effectively unusable for PDF export.
- Parents, teachers, and students may lose access to generated educational content.
- Creates inconsistent behavior across Android, Web, and iOS platforms.
- Negatively impacts the reliability of the OCR-to-PDF learning workflow.

Recommendation (Optional):

- Review PDF generation handling for large OCR-generated content.

- Investigate memory, timeout, or content-size limitations during PDF generation on Android Mobile Web.
- Add progress indicators and timeout/error handling during PDF creation.
- Validate PDF export functionality using small, medium, and large OCR-generated content across supported platforms.
- Add regression coverage for OCR → Word Work → Word Quizzes → PDF Export workflows.

Evidence / Screenshot:

Please find the Google Drive link below:

https://drive.google.com/file/d/15cp2E5DzI-QMt4PYbbRC2kxBQBafMI5B/view?usp=drive_link

QA Note:

This issue was observed during regression testing with large OCR-generated content. Android Mobile Web consistently fails to generate and download the PDF, while smaller OCR-generated content completed successfully. The issue appears to be associated with content size, PDF generation handling, or mobile browser limitations on Android.

Bug ID: Bug_024

Title: PDF Generation Takes Excessive Time and Does Not Provide Progress Feedback on Web and iOS Mobile Web for Large OCR-Generated Content.

Module: Snap or Upload a Photo → Word Work → Word Quizzes → PDF Export

Description: When a user uploads or captures an image containing a large amount of text/content through the "Snap or Upload a Photo" feature and navigates through Word Work → Word Quizzes, the generated Word Practice content is displayed successfully. However, after clicking Download PDF, PDF generation takes a noticeably long time to complete on Web and iOS Mobile Web. During this period, the application does not provide sufficient progress, status, or completion feedback to indicate that PDF generation is still in progress. Although the PDF is eventually generated and downloaded, users may assume that the application has become unresponsive or that PDF generation has failed due to the prolonged processing time and lack of feedback.

Environment: NA

Platform: Web, iOS Mobile Web

Device Model: Windows Laptop / iPhone (iOS 17)

Build Version: NA

OS Version: Windows 11 /iOS 17

Test Scope: Performance Testing / PDF Export Testing / OCR Validation Testing / Usability Testing / Cross-Platform Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always (Observed with large OCR-generated content)

Precondition:

- User is logged in successfully.
- User has access to the Snap or Upload a Photo feature.
- User uploads or captures an image containing a large amount of text/content.
- OCR processing completes successfully.
- Word Work and Word Quizzes content is generated successfully.
- PDF export functionality is available.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Click "Snap or Upload a Photo" from the home screen.
3. Capture a photo or upload an image containing a large amount of text/content.
4. Wait for OCR processing to complete.
5. On the "Choose how to practice this word list below" screen, click Word Work.
6. Click Word Quizzes.
7. Wait for the "Building your word practice..." process to complete.
8. Scroll to the bottom of the generated content.
9. Click Download PDF.
10. Observe the PDF generation and download process.

Actual Result:

- PDF generation takes a noticeable amount of time to complete.
- The delay is consistently reproducible on Web and iOS Mobile Web.
- The delay is more apparent when larger OCR-generated content is processed.
- The application does not provide adequate progress or completion feedback during PDF generation.

- Users receive no indication of estimated wait time or processing status.
- The PDF eventually downloads successfully after an extended delay.

Expected Result:

- PDF generation should complete within a reasonable timeframe.
- Users should receive clear progress/status feedback while PDF generation is in progress.
- A success notification or download-ready indication should be displayed when PDF generation is complete.
- Large OCR-generated content should be processed efficiently without causing excessive delays.

Impact:

- Users may incorrectly assume that PDF generation has failed.
- Users may repeatedly click the Download PDF button, potentially creating duplicate requests.
- Users may abandon the workflow before PDF generation completes due to the prolonged waiting time.
- The application appears unresponsive during PDF generation.
- Overall user experience is negatively impacted.
- Creates uncertainty regarding the status of the PDF export process.

Recommendation (Optional):

- Optimise PDF generation performance for large OCR-generated content.
- Display a progress indicator or status message during PDF generation.
- Provide a success notification when the PDF is ready for download.
- Consider implementing timeout handling or estimated processing feedback for large documents.
- Validate PDF generation performance across different content sizes.

Evidence / Screenshot:

Please find the Google Drive recording link below. (Issue15)

For Web:

https://drive.google.com/file/d/1YkkrKr0pbZzU5N-0axB92F7bNrW8rKUt/view?usp=drive_link

For iOS:

https://drive.google.com/file/d/1sLr-cSlayz4CNnQpixJQjRoKEY28FzvC/view?usp=drive_link

QA Note:

This issue was observed during cross-platform testing with large OCR-generated content. PDF generation eventually completes on Web and iOS Mobile Web; however, significant delays were observed and no meaningful progress feedback was displayed during processing.

Bug ID: Bug_025

Title: Saved Reading PDF Does Not Display Story Illustrations That Are Visible in the Application.

Module: Learn → Read with Pictures → My Readings → PDF Export

Description: When a user opens a saved reading from the My Readings section and downloads the PDF, the generated PDF does not display the story illustrations that are visible in the application. Instead, the PDF shows placeholder/loading content such as "Creating illustration..." where the actual images should appear. In the application view, the story illustrations are displayed correctly. However, after downloading and opening the PDF, the illustrations are missing from the exported document.

Environment: NA

Platform: Web, Mobile Web

Device Model: Windows Laptop / Android Mobile

Build Version: NA

OS Version: Windows 11 / OnePlus 10 Pro 5G

Test Scope: Functional Testing / PDF Export Testing / Regression Testing / Visual Content Validation

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User has access to Learn → Read with Pictures.
- A saved reading with story illustrations is available under My Readings.
- PDF export functionality is available.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Click Learn.
3. Select Read with Pictures.
4. Select any grade level, such as K1, Grades 2–3, or Grades 4–5.
5. Select any story, such as "The Fox and the Grapes".
6. Verify that story illustrations are visible in the application.
7. Navigate to My Readings.
8. Click PDF / Download PDF.
9. Wait for the "Building your PDF..." process to complete.
10. Open the downloaded PDF.
11. Observe the illustration sections in the PDF.

Actual Result:

- None of the story illustrations displayed in the application are included in the downloaded PDF.
- The PDF displays placeholder/loading content such as "Creating illustration..." instead of the generated illustrations.
- All illustration sections are affected within the exported PDF.
- The exported PDF content does not match the application view.

Expected Result:

- The downloaded PDF should include the same story illustrations displayed in the application.
- PDF export should wait until all illustrations are fully loaded before generating the final document.
- Placeholder or loading messages such as "Creating illustration..." should not appear in the exported PDF.
- Exported PDF content should accurately match the completed saved reading.

Impact:

- Downloaded reading material is incomplete.
- Children lose visual support required for better story understanding.

- Parents and teachers may receive PDF content that does not match the application view.
- Reduces the usefulness and quality of the exported learning material.
- Creates inconsistency between on-screen content and downloaded PDF output.
- Exported learning materials may appear incomplete or unfinished to end users.

Recommendation (Optional):

- Ensure PDF generation waits until all story illustrations are fully loaded.
- Exclude placeholder/loading states from the exported PDF.
- Validate image readiness before triggering PDF export.
- Add regression coverage for My Readings → PDF Export with illustrated stories.

Evidence / Screenshot:

Please find the Google Drive recording link below.(Issue 16)

For Web:

https://drive.google.com/file/d/1BAFM5ess0FIEKiwnS1ImwF0geGXIUeyl/view?usp=drive_link

For Android:

https://drive.google.com/file/d/1NtvGVKlsCXVT7L7KvmyLFSzeM9e50wrZ/view?usp=drive_link

QA Note:

This issue was observed while validating the My Readings PDF export flow. The story illustrations are available in the application, but the downloaded PDF captures the loading/placeholder state instead of the completed illustration.

Bug ID: Bug_026

Title: Connect Dropdown Menu Items Are Truncated on Mobile Web When Header Menu Is Repositioned.

Module: Header Navigation → Connect Menu

Description: When the user navigates to another module such as Learn → Read with Pictures and then opens the Connect dropdown menu on Mobile Web, the dropdown panel is not displayed correctly within the visible viewport. The issue occurs when the header navigation layout is repositioned and the Connect menu appears closer to the upper/right side of the screen. In this state, several Connect menu item labels are truncated or partially hidden, making it difficult for users to read the complete option names.

Environment: NA

Platform: Android Mobile Web & iOS Mobile Web

Device Model: OnePlus 10 Pro 5G / iPhone

Build Version: NA

OS Version: Android 16.0.3 (OxygenOS) / iOS 17

Test Scope: UI Testing / Responsive Testing / Usability Testing / Cross-Platform Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Medium

Frequency (Always/Sometimes/Rare): Always (Iphone) and Sometimes / Conditional (Android)

Precondition:

- User is logged in successfully.
- User is accessing the application from iOS & Android Mobile Web.
- Header navigation is visible.
- User has navigated to another module/page where the header menu is repositioned.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Open the application on iOS and Android Mobile Web.
3. Navigate to the home page.
4. Tap the Connect dropdown menu from the header navigation.
5. Observe the dropdown menu items.

Actual Result:

- The Connect dropdown menu extends beyond the visible viewport.
- Menu item labels are truncated and partially hidden.
- Users cannot view the complete names of all menu options.
- Dropdown presentation appears misaligned on iOS and Android Mobile Web.

Expected Result:

- The Connect dropdown menu should be fully visible within the viewport boundaries.
- All menu item labels should be displayed completely without truncation.
- Dropdown positioning and responsiveness should be consistent across supported mobile devices.

Impact:

- Reduces readability of navigation options.
- Creates a poor user experience on iOS & Android Mobile Web.
- Users may have difficulty identifying available Connect features.
- Results in inconsistent UI behavior across platforms.

Recommendation (Optional):

- Review responsive styling and dropdown positioning for iOS and Android Mobile Web.
- Ensure dropdown width adapts correctly to viewport size.
- Validate navigation menu rendering across different iPhone screen sizes and orientations.

Evidence / Screenshot:

Please find the Google Drive link below:

For iOS: https://drive.google.com/file/d/1uqck-ayjNDp9nkD6ODfbGxBuXxpydghu/view?usp=drive_link

For Android: https://drive.google.com/file/d/1uqck-ayjNDp9nkD6ODfbGxBuXxpydghu/view?usp=drive_link

QA Note:

This issue is conditional. On Android Mobile Web, the issue is observed after navigating to another module such as Learn → Read with Pictures, where the header/menu layout is repositioned and the Connect dropdown appears closer to the screen edge. The dropdown then opens outside the visible viewport and causes menu labels to be truncated

Bug ID: Bug_027

Title: Home Language Dropdown Is Misaligned Within the Languages Section.

Module: Create → Bilingual Crossword → Languages Configuration

Description: When the user navigates to the Bilingual Crossword creation page, the Home Language dropdown is not properly aligned with the corresponding language selection section. The dropdown appears visually shifted, resulting in an inconsistent layout and reducing the overall UI quality of the page.

Environment: NA

Platform: Web

Device Model: Windows 11

Build Version: NA

OS Version: Windows 11

Test Scope: UI Testing / Visual Validation / Cross-Browser Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Low

Priority (High/Medium/Low): Low

Frequency (Always/Sometimes/Rare): Always

Precondition:

- User is logged in successfully.
- User navigates to Create → Bilingual Crossword.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Navigate to Create.
3. Open Bilingual Crossword.
4. Observe the Languages section.
5. Review the alignment of the Home Language dropdown.

Actual Result:

- The Home Language dropdown appears visually misaligned within the Languages section.
- The dropdown positioning is inconsistent with the adjacent language selection area.
- The overall layout appears uneven.

Expected Result:

- The Home Language dropdown should be properly aligned with the surrounding UI elements.
- All fields within the Languages section should maintain consistent spacing and alignment.

Impact:

- Reduces visual consistency of the page.
- Affects overall user experience and UI quality.
- Creates an unpolished appearance in the configuration section.

Recommendation (Optional):

- Review CSS styling, spacing, and alignment rules for the Home Language dropdown.
- Ensure consistent alignment across all screen resolutions and supported browsers.

Evidence / Screenshot:

Bug ID: Bug_028

Title: Shared Bilingual Flashcards Display Only "JAPANESE" Instead of Translated Words After Card Flip.

Module: Connect → Bilingual Flashcards → Share Flashcards

Description: When a user creates Bilingual Flashcards with Japanese as the home language and shares the flashcards using the Share / Copy Link option, the shared flashcard page does not display the Japanese translated words correctly after flipping the cards. Instead of showing the actual Japanese translations, the back side of each flashcard displays only the generic label "JAPANESE". The same flow works correctly for Hindi, where the translated words are displayed properly after opening the shared link.

Environment: NA

Platform: Web & Mobile Web

Device Model: Windows 11 / Mobile Web (Android and iOS)

Build Version: NA

OS Version: Windows 11

Test Scope: Functional Testing / Localization Testing / Share Link Testing / Regression Testing

APP: K5 Genie App

Severity (Critical/High/Medium/Low): Medium

Priority (High/Medium/Low): High

Frequency (Always/Sometimes/Rare): Always Japanese

Precondition:

- User is logged in successfully.
- User has access to Connect → Bilingual Flashcards.
- Flashcards can be generated successfully.
- Share / Copy Link functionality is available.

Steps to Reproduce:

1. Log in to the K5 Genie application.
2. Click the Connect menu.
3. Select Bilingual Flashcards.
4. Select Japanese as the home language.
5. Select the Animals preset.
6. Select the Community Helpers cards link.
7. Click Create Flashcards AI.
8. Scroll down to the Try It Out section
9. Click any flashcard and verify that the Japanese translation is displayed correctly in the application.
10. Scroll down and click Share These Cards via WhatsApp or Copy Link.
11. Open the shared flashcard URL in a browser.
12. Click / flip the flashcards on the shared page.
13. Observe the translated text displayed on the cards.

Actual Result:

- Japanese translations are displayed correctly in the original generated flashcards page.
- After opening the shared URL, the flashcards are displayed.
- When the cards are flipped, the back side displays only the generic label "JAPANESE".
- Actual Japanese translated words are missing from the shared flashcard view.
- The issue is not observed with Hindi, where the translated words display correctly after sharing.

Expected Result:

- Shared flashcards should preserve and display the actual translated Japanese words.
- When users open the shared URL and flip the cards, each card should show its correct Japanese translation.
- Shared flashcard behavior should remain consistent across all supported languages

Impact:

- Shared Japanese flashcards become incomplete and unusable for learning.
- Users cannot practice or share Japanese vocabulary correctly.
- Creates inconsistent behavior between languages.
- Reduces trust in the Bilingual Flashcards sharing feature.
- Parents, teachers, or students receiving the shared link may not see the intended translated content

Recommendation (Optional):

- Review shared flashcard data persistence and rendering logic for Japanese translations.
- Verify whether Japanese translation values are being saved and passed correctly in the shared URL/session data.
- Ensure the shared view renders translated text instead of the language label.
- Validate the Share / Copy Link flow across all supported home languages.
- Add regression coverage for Bilingual Flashcards sharing with Hindi, Japanese, and other non-Latin languages.
